Abbreviations: NH = non-Hispanic.

* Pairwise comparisons: each row or column serves as the referent category for the remainder of that row or column. Race and ethnicity of the child or adolescent was reported by the parent or guardian. Children and adolescents identified in this report as White, Black, Asian, or other or multiple races were reported by the parent or guardian as non-Hispanic. Children and adolescents identified as being of other or multiple races had more than one race category selected, or were identified as American Indian/Alaska Native, Native Hawaiian or other Pacific Islander. Children and adolescents identified as Hispanic might be of any race.

[†] Difference in ≥1 dose coverage estimated using Kaplan Meier survival analysis methods with the event defined as the month and year of vaccination and the censoring variable defined as the date of interview. Estimates in the table represent vaccination coverage as of August 31, 2022.

[§] Statistically significant ($p < 0.05$) difference by test for pairwise comparisons.
